Effect of Network Ties & Personality on Opportunity Recognition in People with Disabilities and Moderating effect of Self-Efficacy

Abstract

In quest of inclusive growth, developing countries are also shifting their focus towards diversity and inclusion of vulnerable people into the mainstream (Cook, 2006). The erstwhile Planning Commission¹ has witnessed a paradigm shift in approaches from the welfare-based approach to right-based approach to empowerment-based approach and work towards feasible inclusive growth and gainful engagement strategies. One such strategy for gainful engagement is the extent of entrepreneurial activities that brings economic independence and provides an equal level playing field. However, despite government supports and institutional voids, the minority, specially, people with disabilities are not fruitfully engaged². Researchers have examined umpteen plausible reasons that seem to affect entrepreneurial activities, in general, and alertness to entrepreneurial opportunities, in particular, by people with disabilities. Based on the literature, we classified the factors viz. social network (mentors, informal networks, professional forums, and family & friends, (Ozgen and Baron, 2007)) and personality (Big Five plus One classification: openness to experience, conscientiousness, extraversion, agreeableness, neuroticism and risk taking (Zhao et al. 2010)) that affect entrepreneurial opportunity recognition by people with disabilities. The study also checks the moderating effect of self-efficacy of people with disabilities’.

² http://www.ilo.org/wcmsp5/groups/public/---asia/---ro-bangkok/---sro-new_delhi/documents/publication/wcms_229259.pdf

We administered an online survey and received one hundred and eighty usable responses. Due to exploratory nature and small data, we tested the model using Partial Least Square-Structural Equation Modelling (PLS-SEM).

The results in our study are consistent with previous researches. However agreeableness, family & friends, and professional forums offered counter intuitive insights. We also found that the self-efficacy of people with disabilities positively moderates the relationship. The results of this research offered considerable ramifications for policy makers, academia, and also people with disabilities. Finally the study concludes with a roadmap for extending the research and also indicates the shortcomings of the present work.

Keywords: Entrepreneurial opportunity recognition; networks; personality; self-efficacy; people with disabilities

ACKNOWLEDGEMENTS

My journey as an participant FPM comes to an end and I must admit that it would not have been possible without the guidance and support of many people. I remain grateful to each one of them and take this opportunity to express my gratitude that has been with me during the entire process.

I express my gratitude to Prof. Prashant Salwan for guiding and encouraging me at every step. He has been a morale booster and provided unconditional support at every step that kept me moving during the entire journey. I would like to thanks Prof. D L Sunder for his efforts in critically evaluating my work at all stages. His erudite scholastic approach has always challenged my thought process. This helped me view things through a critical lens and guided me in streamlining my thoughts in a proper direction. I am also indebted to Prof. Patturaja for believing in me. Besides his valuable inputs and comments on my thesis work, he has always been a source of constant encouragement and motivation.

I wish to extend my heartfelt appreciation to Prof. P T Srinivasan, Prof. Swapnil Garg and Prof. Manoj Motiani (my thesis evaluation committee) for their prompt responses and extremely valuable suggestions for modifications on initial draft work. Their suggestions helped me a lot in improving the quality of final version of my thesis.

I extend my heartfelt gratitude to Prof Ravi Chandran, former Director IIM Indore and Prof. Rishikesh T Krishnan, Director IIM Indore for appreciating my research work. I thank former FPM Chairpersons Prof. Ganesh and Prof Ranjeet Nambudiri for time and again providing their support and special efforts in making my stay comfortable.

I would also like to appreciate efforts of Ms Monika Mandloi, Mr Mukesh Chaudhary, Mr Sandeep Das, Ms Neha and Mr Vikas of FPM office for their support in managing

administrative concerns, logistic issues and Mr Gopal Singh Jadon for procuring research papers in every possible ways.

I accord my thanks to my PGP and FPM batch mates, seniors and juniors for their support at various stages.

I extend heartfelt gratitude to Jatin, Nikunj, Subhasish Dada and Krishna Sir for their constant endeavour in inspiring and encouraging me in both academic and non academic matters during the program.

I always fall in dearth of words to express my gratitude to my teacher, guide, colleague and friend Neeti Mam. She has always stood by me in my bad times and motivated me to take up research as a career field.

Palka (my batch mate, best friend, mentor, advisor, best critique), I take this opportunity to thank her for many things. Without her my FPM journey would have been very different and difficult. Her unconditional emotional support during thick and thin times kept me moving. I have always counted on her for continuous guidance and unceasing encouragement. I have spent the most memorable and best of times with her. Her contribution is to such an extent that these few lines can hardly do justice. Indeed, I shall never repay her obligations.

I am always in death of words to convey thanks to Atul for his uncanny love and invisible hold. He has always been motivating and inspiring. His friendship has been an extraordinary emotional support along the way.

I owe this research to my mother and father, who have always showered their blessings and provided emotional support when I was away for four years. They have supported me unconditionally and reminded me that they were proud of me doing FPM that sustained

my motivation to work hard to complete this mammoth task of completing this thesis. My sister Peeyushi, brother Kartik, brother-in-law Chandan and sister-in-law Swati who cooperated me unconditionally and helped me in completing this endeavour successfully.

I want to thank Shreyan, my nephew, his innocent smile and naughtiness kept me alive and happy during this lone journey.

I express my apology and thanks to everybody who were important to the successful realization of this thesis, inspired and supported me in many ways and whose names I could not mention individually here.

Many thanks to everyone.
