ABSTRACT

The study endeavors to uncover the role of workplace ostracism in predicting work engagement. Workplace ostracism is a phenomenon which can be encountered in every workplace (Ferris, Brown, Berry, & Lian, 2008). The study examines the effect of workplace ostracism on work engagement. More specifically, the study examines the interactive effects of role ambiguity and workplace ostracism, and the interactive effects of the work experience at the current workplace and workplace ostracism, on work engagement. The study also looks into the individual-level variable of psychological meaningfulness and the organizational-level variable of perceived organizational support as potential antecedents of workplace ostracism.

The data for the study is collected from 326 teachers (university and college) in two phases. In the first phase the data pertaining to the independent variable of workplace ostracism and the variables of role ambiguity, work experience at the current workplace, psychological meaningfulness and perceived organizational support is collected. After a gap of 35 days, data pertaining to the dependent variable of work engagement is collected.

Data were analyzed using Partial Least Squares Structural Equation Modeling (PLS-SEM). Smartpls3 software is used for the purpose. The results are largely consistent with the proposed relations except that the perceived organizational support is not significantly related to workplace ostracism. Workplace ostracism is found to partially mediate the relation between psychological meaningfulness and work engagement. Thus, we find that psychological meaningfulness leads to an increase in work engagement indirectly through reduced perceptions of ostracism.

Partial Least Squares Multigroup Analysis (PLS-MGA) is conducted to compare the path coefficients of the relations across the two gender groups. The relation between perceived organizational support and workplace ostracism is found to be significant only in

case of females. This result suggests that the perception of a support from the organization is important to reduce the perception of ostracism in case of females. Workplace ostracism is found to partially mediate the relationship between perceived organizational support and work engagement only for females. Similarly, role ambiguity moderates the relationship between workplace ostracism and work engagement only for females. The ambiguity inherent in the job interacts with the ambiguity inherent in the phenomenon of workplace ostracism to negatively affect the work engagement. In the end, the study brings out its limitations and suggests some directions for future research.

Keywords: Workplace ostracism, work engagement, role ambiguity, psychological meaningfulness, perceived organizational support.

ACKNOWLEDGEMENTS

Einstein once remarked—“*There are only two ways to live your life. One is as though nothing is a miracle; the other is as though everything is a miracle.*” I have always held everything in life to be a miracle. The fact that I was born into a particular family and the fact that I have been blessed with an able body and an able mind (although I’m not very sure about the able mind stuff), is and will always remain a miracle to me. (I mean, just look at the odds against this happening). I am forever indebted to Existence for these blessings.

For the part of my life spent as a fellow at the Institute, I would like to thank Prof. Sushanta Kumar Mishra, for agreeing to guide my dissertation (i.e. for becoming the chairperson of my Thesis Advisory Committee (TAC)) and for focusing my thought process over the years. I am highly grateful to him for his support, continuous encouragement, constructive feedback and constant emphasis on quality work, throughout the research process. It has been a wonderful journey with him.

I would also like to thank Prof. Amitabh Deo Kodwani and Prof. Biswanath Swain for agreeing to be the members of my TAC. I am grateful to Prof. Amitabh and Prof. Swain for always being appreciative of my work. Prof. Amitabh has always helped me with his kind words whenever he felt that I was tensed and worried. Prof. Swain has always been willing to help me out in every possible way.

I am grateful to Prof. Srinivas Gunta and Prof. Siddhartha K. Rastogi for the open environment in their classes. Their classes, I feel, had an almost negligible power distance between and this I what I feel allowed one to think and exchange ideas freely. I am grateful to both of them for their time both inside and outside of the class.

My interactions with the administrative staff of the FPM office have always been wonderful. I would like to thank Mr. Mukesh Choudhary, Mr. Sandeep Kumar Das, and Ms. Neha Bhosle of the FPM office for their support throughout the duration of my program. I am especially grateful to Mukesh sir for all the help that he has provided me in matters small and big. I would also like to thank Ms. Monika Mandloi who was earlier in the FPM office.

The entire staff of the library has been very supportive throughout the program. I would like to thank Dr. Akhtar Parvez, Mr. Gopal Singh Jadon, Mr. Vilas Nimbhorkar, Mr. Jayprakash J. Sadhu, Ms. Tulika Singh and Mr. Shashikant Jatwa for being always ready to help. I would also like to thank all the security personnel posted in the library and in the library basement.

Mr. Ashish Parmar of the Finance and Accounts department has been a great help in all my dealings with the Finance and Accounts department. I would like to thank him for the smoothness with which he handled all the dealings. His pleasant attitude towards everything was a great booster for my spirit.

Collection of data is an important part of any empirical research and also a very tedious task. I would like to thank Ms. Soma Lilhare of the Publication department for being

a great help in collecting data for my pilot study. I would also like to thank Ms. Indira Sharma for arranging contacts for collection of data for my final study.

Many times during the program, I have been tense and my motivation to go on has gone down and it is precisely at such moments that the people around me have made a difference. There have been many people, security guards and housekeeping staff among them, who have helped me to look at the brighter side of things by their warmth and cheerfulness. I do not know most of them by name but I would like to thank Mr. Ganesh Waghmare and Mr. Laxminarayan Jodwal of the Hostel Reception Centre and Mr. Viren Singh Thakur of the JAM (Juices and More) who I believe, represent all of them in spirit.

I highly appreciate the support of my batchmates Roopak, Avik, Atul, Nikunj and Pankaj throughout the program. Nikunj was my saviour in practically all the quantitative courses during the course work. I shall forever be grateful to him.

I lost my mother some years ago. Whatever I am today or whatever I might become in the years to come is because of the upbringing that she gave me. Sometimes I may be conscious of it and sometimes I may not be, but the truth remains that I am what I am largely because of her. I would also like to thank Papa for his constant support throughout the duration of this program. He has never forced anything on me and always allowed me to think for myself. All that I am is because of my parents. I am the result of their genes and the environment which they provided me when I was growing up. Although I will never be able to thank them enough, I would like to take this opportunity to place on record my gratitude.

I would also like to thank Jhaiji (my dadiji) for being a constant source of joy in my life. I feel like a child again in her presence, free of any worries. Her stay with me for some time during the program was a huge support. Buji has always been ready to assist me in any way she can. Her love and support were indispensable throughout. I am thankful to her for all the help that she provided in the collection of data for the study.

I would like to thank my father-in-law and mother-in law for their understanding during this period. My father-in-law is more like a friend to me. His ever-cheerful mood washes away any tensions that I might have. I am also thankful to him for helping me in acquiring contacts for the collection of data.

Mohit, my cousin, has been ever-ready in helping me in any way he can. He is a great source of strength in difficult times. He was a great help in the collection of data.

If there is any place in the country after home that I love to go to, that is Uma buji's place. I used to go to place whenever I could. In fact, I had stayed at her place before coming to the Institute for the first time. In her presence, I used to feel like the same care-free child that I become in the presence of my dadiji. Her passing away, although relieved her of her tremendous suffering, was a blow for me. Bhushan uncle has always loved me and I do not miss any chance to visit him. Neeti didi has been someone I can count on anytime.

I would like to thank my friends Manish and Sorabh for their love and support. Often, I would not get the time to call them. They have showered their unconditional love by calling

me often and helping me in any ways they could. They have helped me immensely in the collection of data.

It is often difficult to find someone with whom your mental frequency matches to such an extent that he or she fits the definition of a friend as given by Emerson—“*A friend is a person with whom I may be sincere. Before him I may think aloud. I am arrived at last in the presence of a man so real and equal, that I may drop even those undermost garments of dissimulation, courtesy, and second thought, which men never put off, and may deal with him with the simplicity and wholeness with which one chemical atom meets another.*” I am very fortunate to have found such a friend in Paramveer. I am highly grateful to him for his love and care.

I feel highly indebted to Kamal Bhaiyya for the love and support that I have received from him throughout the program.

Life as a doctoral student often gets dreary. I have been very fortunate that I had the company of my little friends Arjun, Anshika, Chandramauli, Joey, Rishika, Bhavya, Abigail, Ridhaan, Aarushi, Vini, Rishi, Hari and Peehu.

Wittgenstein had remarked—“*Whereof one cannot speak, thereof one must be silent.*” I have to remain silent on what the love of my life, my wife, Prabhjot, means for me and what all she has done for me. No amount of words can express my gratitude and it would be a folly to make any attempt to do so. I would just like to thank her for being in my life.

Vivek Khanna
