Database Guide

Learning Centre
Indian Institute of Management Indore

INTRODUCTION

Typeset is publishing tools that re-edit and re-format of academic work. It intends to be the perfect bridge for ease of intuitive writing and collaboration. the main features are as follows:

- ❖ Auto-format with 100% compliance to any journal's guidelines in seconds;
- ❖ Choose from over 45,000+ verified Scopus indexed journal formats like Elsevier, Springer, and IEEE, etc.;
- ❖ Integrated plagiarism check for your research;
- ❖ Integrated spelling and grammar check;
- ❖ Cite and order in one-click with any citation style;
- ❖ Collaborate seamlessly with any number of peers;
- ❖ Export to MS-Word, LaTeX or PDF.

REGISTRATION

Step 1: Please fill all required information, use Institutional Email ID only.

ELSEVIER

Information Seeking Behaviour of Library Professionals:
A study of LisLinks discussion forums

Abstract

Information seeking is the central area of interest among people of all ages in all domains. Before the writing was developed, the information was sought through an oral mechanism. In oral mechanism, the information seeker asks information in natural language and the desired information was provided by the expert from the community. This whole process happens in real-time. In this system, only the challenging task was to search for an expert in that area. Soon after the development of writing the large volume of text was developed and the information was sought through these large text data. From here the biggest challenge was started, that was "information overload". Soon after the development of technologies, these large volumes of text data is processed in tagging of text related to a particular theme. But still, the problem arises of how much text to be read out for finding out solutions to the given problem. As it was in the oral mechanism, the same problem arises to find out the best book or the text which have a solution or if it has the solution then there are cases in which a problem occurs while executing the solution and a real-time solution is required. It was the internet technology or more specifically web technology which has brought a paradigm shift in this whole information seeking process.

1. Introduction

The rapid growth of technology especially mobile, web 2.0 and social media facilitated the freedom to people to express their feelings, views, and opinions in natural language about products or services they have used. These feelings, opinions, discussions shared by netizens on different platforms are termed as user-generated content or user-generated content. These feelings, opinions, discussions shared by netizens on different platforms are termed as user-generated content or user-generated content. These feelings, opinions, discussions shared by netizens on different platforms are termed as user-generated content or user-generated content.
